

Stellar™ Competent Cells

Catalog No.	Amount
636766	50 x 100 µl

Description

Stellar Competent Cells are an *E.coli* HST08 strain that provides high transformation efficiency. These cells can be used in a wide variety of applications—from preparation of cDNA and genomic libraries, to construction of longer-length genomic libraries, to subcloning, and even methylated DNA cloning. Stellar Competent Cells lack the gene cluster for cutting foreign methylated DNA (*mrr-hsdRMS-mcrBC* and *mcrA*), and are therefore useful for cloning methylated DNA. The cells can also be used for blue/white screening (i.e., α -complementation) when transformed with vectors containing the *lacZ α* gene. This package includes 50 tubes of competent cells (100 µl/tube), SOC Medium and a pUC19 vector.

Package Contents
